Masters Thesis

- Title *On the persistence of wireless advertising without infrastructure support.*
- Supervisors Professor Vincezo Mancuso & Professor Marco Ajmone.
- Description This thesis studies and presents experiments on the possibility of providing content availability to end user terminals by exploiting D2D infrastructureless connectivity and opportunistic communication.

PhD Thesis

- Title *Infrastructure-less D2D Communications through Opportunistic Networks.*
- Supervisors Professor Vincezo Mancuso & Professor Marco Ajmone.
- Description In this dissertation I look at opportunistic D2D networking, possibly operating in an infrastructure-less environment, and I investigate several schemes through modeling and simulation, deriving metrics that characterize their performance. In particular, I consider variations of the Floating Content (FC) paradigm, that was previously proposed in the technical literature.
